

## TEXAS BACK INSTITUTE

Orthopedic Spine Surgery, Physical Medicine and Rehabilitation

After more than three decades, Texas Back Institute remains one of the most academic private practices in spine care and is one of the largest freestanding multidisciplinary academic spine centers in the world. Texas Back Institute offers the latest minimally invasive technological advancements and medical breakthroughs, leads and participates in numerous FDA trials, develops surgeons through its fellowship program, and employs an expert medical team and comprehensive support staff—ensuring the greatest outcomes for helping its patients get back to life.

Texas Back Institute's world-renowned specialists deliver exceptional patient care with a multidisciplinary approach to back and neck pain. The medical team comprises board-certified orthopedic spine surgeons, medical physicians, internists, physiatrists, pain specialists, exercise physiologists, and a team of physical and occupational therapists who are dedicated to helping their patients get back to life. Texas Back Institute's "surgery as a last option" approach to back pain has always been the cornerstone of its care philosophy. The more than 25 physicians at Texas Back Institute are leaders in surgical and non-surgical treatment options for back and neck pain, from the most common outpatient procedures to the most complex cases. Thanks to advanced diagnostic imaging, physicians can identify potential causes of your back pain and neck pain and create a treatment plan specific to you.

For years, many patients who suffered from back and neck pain had to look out side of the Dallas area—even overseas—to find the most advanced treatment to help treat their pain. Texas Back Institute has the latest technologies, procedures, and research at home, placing relief from pain just an appointment away.

Two of Texas Back Institute's programs, the Center for Disc Replacement and the Scoliosis Spine & Tumor Center, have contributed to better, healthier lives for patients throughout North Texas as well as nationally. At the Center for Disc Replacement, led by spine surgeons who are pioneers in artificial disc replacement, Texas Back Institute performs life-changing disc replacement procedures on hundreds of patients each year. Artificial disc replacement gives patients an opportunity to retain mobility and resume their lives with minimal pain or discomfort. World-class arthroplasty surgeons, led by Drs. Scott Hunsenthal, Richard Gayle, and Jack Zlotol, have together performed more than 1,000 disc replacement procedures with more than 10 different types of devices. Several medical milestones in disc replacement have occurred at Texas Back Institute's Center for Disc Replacement, including the first artificial disc replacement in the United States. Texas Back Institute remains dedicated to helping patients get back to life with minimally-invasive, non-operative treatments that require very little post-procedure hospitalization.

Texas Back Institute and Texas Health Presbyterian Hospital Plano have collaborated to establish an advanced Scoliosis & Spine Tumor Center, which is focused on providing the most appropriate and least invasive treatment, support, and coping strategies for adolescents and adults suffering from spinal deformities and tumors. Whether your goal is to get back to sports, work, hobbies or just enjoying life, the specialists at the Scoliosis & Spine Tumor Center can help. Led by internationally known spine surgeon Dr. Kabir Inderman, the center combines minimally-invasive technologies and the wide range of resources available to develop a comprehensive plan tailored to your individual needs.

Also located in Arlington, Denton, Flower Mound, Fort Worth, Mansfield, McKinney, Odessa, Rockwall, Trophy Club, Tyler and Wichita Falls
