Texas Back Institute was established in 1977 as a multispecialty clinic designed to deliver conservative, compassionate, team-based care tailored to each individual, including prevention and rehabilitation, as well as surgical care.

Since that time, we have also become known for technological innovation, groundbreaking research and academic excellence that extends to physicians in training through our fellowship program. That tradition continues today. TBI has expanded its multispecialty offerings to include neurosurgical services. Our 20 surgeons now include both orthopaedic spine and neurosurgery specialists. Texas Back Institute has a research arm, which celebrates its 30th anniversary this year and has been instrumental in bringing new technologies and techniques from around the world to spine care in the United States. Additionally, twice a month we host a Neuroscience

Conference with international speakers who enhance our staff knowledge and understanding. Our internal peer review teams also ensure that treatment plans are appropriate for each patient and embrace the most up-to-date science and practices. Texas Back Institute does not

believe in a one-size-fits-all approach. Our surgeons, together with pain specialists, may recommend numerous non-surgical options, as well as minimally invasive surgery, complex revision spine surgery or advanced robotic surgery when necessary. Each patient receives a specifically and carefully designed treatment plan that is supported by a staff that includes a psychologist, physical therapists, nurse practitioners and physician assistants. Texas Back Institute offers care in 17 convenient clinic locations around the Dallas/Fort Worth metroplex. At TBI, we are revolutionizing spine care and changing patient lives.
